PROFILE

Data Analyst specializing in Power BI, advanced Excel, SQL (PostgreSQL) and Python. Works end to end: profiling and cleaning raw data, modelling it into a reusable structure, then designing dashboards that answer one specific business question. Every project is documented as a case study covering the data, the approach, the findings and the impact.

CORE SKILLS

BI & Visualization Power BI, DAX, Power Query, Excel dashboards, Plotly, KPI design

Databases & ETL PostgreSQL, SQL, Star-schema modeling, ETL, n8n automation, Data validation

Programming & Analytics Python, Pandas, Jupyter, Exploratory data analysis, Aggregation

FEATURED PROJECTS

BanglaLedger - Financial Transaction Analytics Dashboard

Power BI, DAX, Power Query, Star-schema data modeling

- Built a full-scale financial dashboard modelling 8 transaction types across 5 customer segments and 8 Bangladesh divisions.
- Delivered five dynamic KPI cards - Amount, Transactions, Average Value, Fee and Tax - each with automatic year-over-year growth indicators.
- Created a parameter-driven trend chart that switches metrics in a single click, plus Success/Failed/Pending status analysis with transaction-level drill-down.

Sales Performance Dashboard

Advanced Excel, SUMIFS, MAXIFS, CHOOSE/SWITCH, Synchronized slicers

- Built a fully interactive sales dashboard with synchronized slicers across Region, Product and Sales Person.
- Analysed 1B+ in aggregate sales, including 178M in revenue from Sylhet and 293.5M from the Laptop product line.
- Added a one-click Qty/Sales toggle and a formula-driven radial network diagram for regional performance analysis.

Bank Loan Data Analysis

Python, Pandas, Plotly Express

- Analysed bank lending data to uncover loan distribution patterns, borrower demographics and risk drivers.
- Found Debt Consolidation to be the dominant loan purpose and borrowers with 10+ years of employment tenure to receive the highest funding volume.
- Linked home ownership status (Rent/Mortgage) to loan volume, with funding rising steadily toward year-end.

SELECTED OUTCOMES

- Gives executives a real-time view of transaction performance, risk and customer behavior through one finance-grade interface.
- Enables real-time sales performance tracking without IT dependency.
- Supports risk assessment and lending strategy through clear, data-backed borrower patterns.
