PROFILE

Data Analyst specializing in Power BI, advanced Excel, SQL (PostgreSQL) and Python. Works end to end: profiling and cleaning raw data, modelling it into a reusable structure, then designing dashboards that answer one specific business question. Every project is documented as a case study covering the data, the approach, the findings and the impact.

CORE SKILLS

BI & Visualization Power BI, DAX, Power Query, Excel dashboards, Plotly, KPI design

Databases & ETL PostgreSQL, SQL, Star-schema modeling, ETL, n8n automation, Data validation

Programming & Analytics Python, Pandas, Jupyter, Exploratory data analysis, Aggregation

FEATURED PROJECTS

BanglaLedger - Financial Transaction Analytics Dashboard

Power BI, DAX, Power Query, Star-schema data modeling

- Modelled 8 transaction types across 5 customer segments and 8 Bangladesh divisions in one star schema.
- Built five dynamic KPI cards - Amount, Transactions, Average Value, Fee and Tax - with YoY growth.
- Added a parameter-driven trend chart and status analysis with transaction-level drill-down.

Sales Performance Dashboard

Advanced Excel, SUMIFS, MAXIFS, CHOOSE/SWITCH, Synchronized slicers

- Built a fully interactive Excel dashboard with synchronized Region, Product and Sales Person slicers.
- Analysed 1B+ in sales, including 178M from Sylhet and 293.5M from the Laptop product line.
- Added a one-click Qty/Sales toggle and a formula-driven radial network diagram.

Bank Loan Data Analysis

Python, Pandas, Plotly Express

- Analysed bank lending data to uncover loan distribution patterns, borrower demographics and risk drivers.
- Found Debt Consolidation the dominant loan purpose, with 10+ year tenures funded the most.
- Linked home ownership status (Rent/Mortgage) to loan volume, rising steadily toward year-end.

FoodPanda Sales & Customer Analytics Dashboard

Power BI, DAX, Power Query, Custom visuals, Bookmarks

- Modelled 150,281 orders from 87 cities into a star schema reporting 987M in sales and 240K ratings.
- Exposed churn outpacing acquisition - 32,798 lost against 11,635 gained, a net decline of ~21,000.
- Proved the city leading on order volume is not the city leading on sales value or order count.

SELECTED OUTCOMES

- Gives executives a real-time view of transaction performance, risk and behavior in one interface.
- Enables real-time sales performance tracking without IT dependency.
- Supports risk assessment and lending strategy through clear, data-backed borrower patterns.
- Gives retention teams one view of churn against acquisition, by city and gender.
